CHING CHEN

Taipei, Taiwan | chenching2509@gmail.com | github.com/chen2509-netizen

SUMMARY

M.S. student in Information Management specializing in Multi-Agent systems, RAG pipelines, autonomous robotics, and production API deployment. Proven capability in delivering verifiable AI codebases with full-stack technical depth.

EDUCATION

National Taiwan University of Science and Technology (NTUST), Taipei, Taiwan 2025 – Expected 2027
M.S. in Information Management

National Taiwan University of Science and Technology (NTUST), Taipei, Taiwan 2021 – 2025
B.S. in Industrial Management

Capstone: Multi-objective scheduling optimization via mathematical modeling and Gurobi implementation.

PROFESSIONAL EXPERIENCE

Service Systems Technology Center (SSTC), ITRI., Hsinchu, Taiwan Jan. 2026 – Jun. 2026
Intern

Built 2D educational games in Unity (C#) with interactive mechanics for ADHD students; engineered and tested FastAPI services for local model hosting.

INDUSTRY PROJECTS

Emergency Notification System (iOS) — MiTAC Digital Technology Jul. 2025 – Aug. 2025, Jan. 2026
Developed iOS frontend with real-time reporting APIs; engineered Firebase/APNs notification systems for high-priority alert delivery.

TECHNICAL PROJECTS

AI & Agent Engineering 2026

- **Multi-Agent Skills & RAG Pipeline**: Designed verifiable AI Skills in the Hermes Multi-Agent Framework with structured tool-use validation; built multi-lingual RAG pipeline with ChromaDB and MD5-hashing for 100% data integrity across 21+ academic papers.
- **Embedding Model Research**: Developed custom multilingual embedding components focused on semantic retrieval quality and backend integration.

Robotics & Autonomous Systems 2026

- **Planning & Control**: Implemented RRT* and A* for path planning; engineered a Unity-based autonomous system with perception, navigation, and task execution (grasping, door-opening).
- **Perception & Reinforcement Learning**: Integrated YOLO for object detection and segmentation; applied Proximal Policy Optimization (PPO) for autonomous control policy learning under dynamic environment conditions.

TECHNICAL SKILLS

- **Programming**: Python (PyTorch, scikit-learn, FastAPI, Qt), C++, C# (Unity), Swift (SwiftUI), R
- **Autonomous Systems & Computer Vision**: Path Planning (RRT*, A*), Reinforcement Learning (PPO), Visual Perception (YOLO)
- **Generative AI & Agent Engineering**: Multi-Agent Frameworks , RAG Pipelines, Memory Engineering
- **Infrastructure & Tools**: Git/GitHub, RESTful APIs, Push Notifications (Firebase, APNs), Gurobi, Linux
- **Languages**: English (TOEIC 825), Japanese (JLPT N3)
